

**Tronox Mine Sites R6/R9
Highways 509 and 605
Cibola and McKinley Counties, New Mexico
Daily Report**

Date: August 5, 2015

Team:

Jeff Criner
Yellow Jacket Drilling
Hathorn Well Service

Health and Safety:

1. Weston team safety topics including physical, radiological, and physical - primarily slips, trips, falls, and dehydration. Biohazards - Watch out for prairie dog burrows – as they can cave in when walked or driven on. Use sunscreen and insect repellent, as needed.

Activities Completed:

1. Yellow Jacket drilled and installed N-15, which was relocated adjacent to the proposed SAG well location. The well was screened from 40 ft to 60 ft bgs.
2. Hathorn Well Service pulled (b) (6) pump from the well. Well TD = 545 ft. Pump Depth = 380 ft. Water level = 73 ft. Pipe and downhole electrical was staged by the well.
3. Hoppers have been removed.

Planned activities for August 6, 2015:

1. Meet (b) (6) at 8:30 am.
2. Meet Jet West Geophysics at 11 am. Mobilize to SAG well and begin geophysics.
3. YJD to cleanup locations on (b) (6) property in the morning.
4. Possibly drill N-7 at (b) (6) property.

Open Items:

1. (b) (6) requested that we sample three of her other wells. Are these going to be added on our list?
